### **IMPORTANT NOTICE – RECALL**

#### **Replacement of Cap for Valve Body Assy**

Yamada Corporation has determined that a defect may exist in some of our Air Operated Diaphragm Pump NDP-P20/20-PP and P25/25-PP series.

Cap A (part number 772946) and Cap B (part number 772947) are located at the top and bottom of Valve Body Assy. The defect is that some of the plastic screw parts of Cap A and Cap B have shrunk and are smaller than the ones at the original molding stage. If the defective pumps are operating, the cap may come off from the valve body assy, and it might hurt human body in worst case.

We shall provide replacement parts free of charge.

Please check model, item number, serial number, and manufacture date of Yamada Pump you are using.

If your pump apply to NDP-P20/20-PP and P25/25-PP series in the attached list, please contact Yamada Corporation or your nearest dealer immediately.

If serial number and manufacture date cannot be identified, please consult us.

We appreciate your cooperation and apologize for any inconvenience this may cause to you.
